

# Queen's Jubilee Miyawaki Forest Application form

Applicant details	
Name of lead applicant:	
Organisation (if applicable):	
Address:	
Telephone:	
Email:	
Preferred method of contact:	
Tell us about your Miyawaki project	
<p><b>Guidance on what to include in this section:</b></p> <p>Where is your project located? Please include a map and any photographs you have. Include grid reference or postcode.</p> <p>What is the land currently used for?</p> <p>Is the land accessible or visible to the public?</p> <p>Are you the landowner? (If not, please provide details of landowner and if they have been contacted)</p> <p>Who will be planting and maintaining the trees?</p>	

**Tell us about your Miyawaki project continued...**

What community groups are involved?

Have you got any design ideas for your Miyawaki Forest?

**Project criteria**

**Essential**

**How does your site meet these criteria?**

Need a site in an urban or semi-urban area (for example town, village setting).

Need a site of approximately 260m<sup>2</sup> (the size of a tennis court) for the actual Miyawaki Forest. This area can be of any shape or orientation, with paths through it, but the forest must not be narrower than 4m across at any point.

<p>Need a site that is accessible for large machinery - digger needed for soil preparation, truck delivery of fencing, trees, soil improvers and mulch.</p>	
<p>No underground infrastructure - soil will be excavated to 1m depth. Need to ensure that no water pipes or gas mains etc. are near to the planting area.</p>	
<p>No overhead infrastructure - trees will grow to 20m or more. Needs to be away from overhead power cables, phone lines or large trees (however, trees on the edge of the site can be incorporated into the design.</p>	
<p>Permission of the landowner to plant the forest at the site. No future site development plans and agreement signed with NNDC.</p>	
<p>Site must be planted by end of December 2023.</p>	

<b>Project criteria</b>	
<b>Desirable</b>	<b>How does your site meet these criteria?</b>
Possible water access point - trees may need watering during first 2 years of growth, so a water access point needs to be located nearby or access for a vehicle and water bowser to get to the site.	
Need a site that is not causing obstruction to people's right of way (the forest becomes very dense and impassable unless a specific pathway is incorporated into the design).	
Site should not be designated as sensitive in any way (for example SSSI, SAC, Ramsar).	
Site should be an open area (we do not want trees to be removed to plant new ones!). Some scrub or low vegetation is fine, as are trees on the edge of the proposed site.	
Site accessible or enjoyable by the public or a specific community group or organisation.
